Apple Apps Report 2026

We are in the fourth year now of the new format of the group which continues to take a non technical approach to sharing information and experience between us on various categories of Apple Apps for the iPhone, iPad and Apple Computers.

We saw another new operating system introduced in 2026 - iOS 27, which we looked at in a bit of detail having explored the functionality of iOS 26 in the previous year.

We continue to meet on Zoom most of the time and that works well for demonstrating the software on the phone or iPad more easily than meeting in person. We did have a face to face meeting at the Group Leader's house which was well attended. We will try and do some more of these in 2027.

We've looked at the following areas of interest this year:

- Artificial Intelligence (ChatGPT, Gemini, Claude) - we spent quite a bit of time on this as it is such a fast moving subject
- iMovie
- Photos
- WhatsApp
- Health
- Navigation
- iCloud

All suggestions for future topics are welcome as are new members. Thanks to the regular attendees of the group for making it enjoyable to facilitate.

Philip Lawson
Group Leader
November 2026
